Human Milk Oligosaccharides as Therapeutics

Tuesday, February 2, 2021 18:00 CET

**Dr. Steven  
Townsend**  
Assistant  
Professor of  
Chemistry,  
Vanderbilt  
University

Carbohydrates are the most abundant organic molecules on earth and are critical to a myriad of biological processes. The Vanderbilt Laboratory for Glycoscience uses a blend of synthetic organic chemistry and microbiology to elucidate the biological roles of carbohydrates, with a foci on advances in chemical synthesis and learning new mechanistic concepts. Our discussion will focus on the application of the host defense properties of human milk.
